

EXECUTIVE COMPETITION REVIEW

Shipaton 2026

Readiness, winning strategy, submission plan, and future roadmap

54/100

CURRENT READINESS

Decision: enter only if store publication and transaction proof are completed by early September.

Assessment date

15 August 2026

Official deadline

30 September 2026, 11:45 PM PDT | 1 October, 09:45 Istanbul

Executive decision

VERDICT Casparel is a credible product, but it is not submission-ready today. Enter only if public store availability and RevenueCat transaction proof can be completed by early September.

The strongest assets are a working public product, an unusually complete education workflow, a real mobile codebase, RevenueCat integration code, and a memorable trust-before-study story. The largest blockers are evidence: no verified store-published binary, no demonstrated purchase lifecycle, no revenue or retention data, no two-minute demo, and no final submission asset pack.

Decision lens	Today	Winning-state requirement
Eligibility	Blocked / unverified	Signed public iOS/Android app accessible in the US.
Monetization	Partial	Verified products, offering, purchase, restore, renewal, expiry, and transfer.
Category	Design is best fit	One sharp credibility-to-action experience with native polish.
Evidence	Insufficient	Real user outcomes, activation/retention/conversion, and first revenue.
Story	Promising	A sub-two-minute on-device narrative supported by proof.

Contents

A navigational overview of this report. Section headings are preserved as real Word headings for the document outline and accessibility tools.

Section	What it covers
01	Official rule baseline and eligibility gates
02	Readiness score and probability bands
03	Category strategy and winning narrative
04	Two-minute demo plan
05	46-day execution roadmap
06	Evidence dashboard and submission kit
07	Post-Shipaton product roadmap
A	App-store/Devpost copy, assets, and final checklist

01 • Official rule baseline and eligibility gates

The official rules require a qualifying native iOS, iPadOS, macOS, or Android app that integrates RevenueCat and is fully published by the deadline. The app must be accessible in the United States. Judges require free trial or promotional access when the experience is paid or gated.

Official item	Requirement used for this plan
Deadline	30 September 2026, 11:45 PM PDT (1 October, 09:45 Istanbul).
Native availability	Fully published qualifying native app, accessible in the United States.
RevenueCat	Integrated and demonstrably tied to the submitted paid/gated experience.
Demo	Public YouTube or Vimeo video under two minutes.
Competition screenshot	1179 × 2556 pixels, without a device frame.
Icon	1024 × 1024 pixels.
Judge access	Free trial, promo code, or equivalent access for gated content.
Next Gen exception	Conditional; includes public open-source repository and other category-specific rules.

RULE CAUTION Next Gen is not a shortcut for the current private repository. Use it only if the entrant independently qualifies, intentionally makes the project public under an appropriate license, and satisfies every category-specific condition.

Gate checklist

Gate	Status	Required proof
Qualifying native platform	PARTIAL	Installable signed iOS/Android release candidate.
RevenueCat integration	PARTIAL	Dashboard offering, sandbox transaction, and entitlement evidence.
Fully published	BLOCKED	Public US store listing and downloadable build.
Judge access	PARTIAL	Clean reviewer account and trial/promo path.
Demo under two minutes	NOT STARTED	Public YouTube/Vimeo URL.
Screenshot and icon	NOT COMPLETE	Exact final exports with no device frame.
Submission evidence	DRAFT	Final text, URLs, screenshots, metrics, and claims.

02 • Readiness score and probability bands

Current readiness profile • 54/100 overall

Readiness score (0–100)

The 54/100 overall score is a prioritization model, not an official judging score.

Winning probability bands

Scenario	Judgment range	Reason
Submit today	<1%	A missing publication gate can make the entry ineligible.
Complete minimum gates	1–3%	Functional, but weak differentiated evidence and traction.
Execute recommended plan	5–10% category	Polished native journey, transactions, demo, and real user evidence.
Grand Prize	<2% without revenue	The rules emphasize revenue shortlist and growth evidence.

INTERPRETATION These percentages are judgment bands, not statistical forecasts: no entrant count, judge distribution, or historical base rate is available. The goal is to become installable, provable, understandable, and memorable in two minutes.

03 • Category strategy and winning narrative

Category	Fit today	Recommendation	Proof needed
Design	MEDIUM	PRIMARY	Native hierarchy, trust communication, accessibility, continuous screenshot story.
Replit Idea to Income	CONDITIONAL	SECONDARY IF PROVEN	Required Replit workflow, three public posts, launch/growth/revenue evidence.
Peace	MEDIUM-LOW	EVIDENCE-DEPENDENT	Measured information-literacy outcome; avoid overstated impact.
HAMM	LOW	DO NOT PRIORITIZE	Conversion craft, pricing evidence, and diverse revenue streams.
Productivity Influencer	POOR	SKIP	Product is not an Apple power-user content utility.
Next Gen	CONDITIONAL	ONLY IF ELIGIBLE	Entrant criteria plus public open-source repo and license.

Recommended positioning

ONE-SENTENCE PITCH Casparel helps students move from ‘I found a resource’ to ‘I know why to trust it, what its limits are, and what to do next.’

Design is the strongest primary target because Casparel can make a complex credibility report immediately understandable to a student. The opportunity is not decorative polish: it is evidence, limitations, confidence, and next action arranged with exceptional clarity.

- Make the source-review reveal the visual center of the submitted app.
- Show evidence and limitations without fear-based or falsely objective scoring.
- Finish native accessibility, motion, empty/loading/error states, and package selection.
- Use screenshots that tell one continuous learner journey.
- Remove every claim that cannot be observed in the submitted binary.

04 • Two-minute demo plan

Time	Beat	What the judge sees and understands
0:00–0:12	Problem	Search results are abundant; confidence is not.
0:12–0:35	Discover	Find a learning resource and show provenance.
0:35–1:05	Evaluate	Run deep source research; surface citations, concerns, and limitations.
1:05–1:25	Act	Save the resource and schedule the next study step.

Time	Beat	What the judge sees and understands
1:25-1:42	Teacher	Recommend or assign it and expose learning evidence.
1:42-1:52	Business	Show the truthful paywall and a successful entitlement.
1:52-2:00	Outcome	Informed learning, not another AI answer box.

CREATIVE RULE Do not list every feature. The product breadth proves execution; the demo must make one credibility-to-action journey unforgettable.

05 • 46-day execution roadmap

46-day critical path to submission

Critical path from technical eligibility to a verifiable submission.

15-21 August • Release candidate

- Require green CI on the audited baseline.
- Create or verify EAS project, Apple/Google identifiers, signing, and store accounts.
- Configure RevenueCat products, entitlement, offering, packages, public SDK keys, and webhook secret.
- Add persistent webhook idempotency and authoritative transfer reconciliation.
- Install internal iOS and Android builds on physical phones; freeze product truth and plan limits.

EXIT GATE A new reviewer can install, log in, restore, and see the same entitlement on client and server.

22–31 August • Prove critical journeys

- Execute purchase, cancellation, renewal, billing issue, expiry, restore, and transfer tests.
- Run VoiceOver/TalkBack, Dynamic Type, reduced motion, keyboard, and poor-network checks.
- Recruit five students and five teachers for task-based sessions; fix the top breakdowns.
- Move the first newer API domain into OpenAPI; add privacy-conscious crash and funnel measurement.

EXIT GATE No P0/P1 defect in onboarding, research, purchase/restore, or account access.

1–10 September • Stores and evidence

- Submit stable builds early to both stores and budget for rejection/remediation.
- Prepare reviewer notes, demo access, privacy forms, and support URLs.
- Instrument registration → resource → review → goal/save → paywall → purchase.
- Collect explicit, consented user quotes and trust-comprehension evidence.

EXIT GATE At least one store approved; the other has no known policy blocker; evidence grows daily.

11–20 September • Category proof

- Lock the primary category and one honest secondary category.
- Produce screenshot narrative, icon, landing copy, and a 110–150 second rough demo.
- Show activation, return, research completion, paywall conversion, and first revenue.
- Complete any required public posts with useful build lessons and transparent metrics.

EXIT GATE Every judging claim has a URL, screenshot, metric, transaction, or user quote.

21–26 September • Submission candidate

- Record the final demo below two minutes and export exact assets.
- Complete Devpost fields and category-specific answers.
- Test every public link signed out and from the US when possible.
- Run clean-install iOS/Android, production smoke, CI, and backup account tests.

EXIT GATE An unfamiliar reviewer can install, understand, and verify Casparel from the submission alone.

27–30 September • Freeze

- No new features after 27 September; ship only release-blocking fixes with full regression.
- Re-check official rules and store availability; submit at least 24 hours early.
- Retain final media and answers offline; verify the saved submission after logout.

EXIT GATE Submission is live, independently verifiable, and backed up before the deadline.

06 • Evidence dashboard and submission kit

Metrics to track daily

Metric	Definition	Direction
Activation	New users completing a first source review in 24 hours	UP
Trust comprehension	Users explaining two strengths and one limitation	UP
Time to value	Registration to useful report	DOWN
Save-to-goal	Reviewed resources connected to a goal	UP
D1 / D7 return	Activated users returning	UP
Paywall conversion	Unique viewers starting trial or purchasing	UP
Restore success	Valid prior purchases restored	100%
Crash-free sessions	Native sessions without fatal error	>99.5%
Research failure	Deep requests ending in timeout/error/ambiguous limit	DOWN
Support response	Time to resolve judge or user access issue	DOWN

EVIDENCE RULE Do not invent submission numbers. A small real cohort with precise definitions is more credible than a large unsupported claim.

Submission asset set

Asset	Specification	Content
Icon	1024 × 1024	No alpha or pre-rounded corners.
Competition screenshot	1179 × 2556	No device frame; resolved UI state.
Store screenshots	5–6 coherent frames	Dashboard → Resources → research → Premium → schedule → plan.
Demo	110–150 seconds; hard max under 2:00	Real on-device discovery, evaluation, action, and transaction.
Judge access	Stable account + trial/promo	No dependence on founder intervention.
Proof pack	Links + screenshots + metrics	Every category claim backed by evidence.

07 • Post-Shipaton product roadmap

Horizon	Objective	Priority outcomes
0–3 months	Reliability and learning loop	Finish OpenAPI coverage; authoritative subscriptions; human-rated source research; goal-linked mobile actions; SLOs and retention cohorts.
3–6 months	Teacher-led distribution	Small class/school pilots; consent/admin controls; teacher credibility rubrics; collaborative evidence; institution-sponsored Premium test.
6–12 months	Durable differentiation	Provenance/evidence graph; curriculum alignment; privacy-preserving institution analytics; language/accessibility expansion; evaluate B2B licensing.

STRATEGIC PRINCIPLE Build durable evidence infrastructure and teacher-led distribution only after student value, safety, subscription reliability, and trust comprehension are proven.

Decision checkpoints

- At three months, continue only the mobile and research bets that improve activation, trust comprehension, or subscription reliability.
- At six months, expand teacher distribution only when pilot classes show repeat use and privacy/consent operations are sustainable.
- At twelve months, evaluate school licensing only after learner value, safety, retention, and support economics are demonstrated.

Roadmap guardrails

- Do not chase broad mobile parity before the credibility-to-action loop is excellent.
- Do not describe AI outputs as objective truth; measure citation validity and human calibration.
- Do not add institution analytics until consent, minimization, export, and deletion controls are ready.

Appendix A • Ready-to-use submission copy

App identity

Field	Recommended value
App name	Casparel
iOS subtitle	Learn. Organize. Study.
Play short description	Vetted open-education resources, classes, schedules, and AI research.
Category	Education
Bundle/package	com.casparel.app
Support	https://casparel.com/support
Marketing	https://casparel.com
Privacy	https://casparel.com/privacy

Store description

Casparel is where students and teachers find trustworthy learning materials and stay organized while they study.

Discover open education. Browse a vetted catalog drawn from Open Library, Wikibooks, and other open sources. Every resource is free to open.

Organize everything. Join classes, build reading lists, plan your schedule, and connect study work to the tools you already use.

Research with AI. Casparel's Source Research helps explain who is behind a resource, what its strengths and limitations are, and how current the evidence appears. Use a quick check or request deep, cited live-web research.

Casparel Premium. Upgrade for unlimited account-level deep source research. The core library stays free; Premium helps fund it.

Devpost tagline

TAGLINE A free, vetted open-education platform for students and teachers: organize your studies, evaluate any source with cited AI research, and keep the core library open with Premium.

Screenshot narrative

#	Screen	Caption
1	Dashboard	Your studies, organized.
2	Resources	A vetted, free open-education library.
3	Source Research	Know who's behind any source.
4	Paywall	Go unlimited with Premium.
5	Schedule	Plan classes and study time.
6	Profile / Plan	Track your usage; upgrade anytime.

Final submission checklist

- ☐ Signed iOS/Android release candidate installed and tested on physical devices.
- ☐ App publicly live and accessible in the United States before the deadline.
- ☐ RevenueCat products, premium entitlement, offering, and webhook live and mapped.
- ☐ Judge promo code or trial verified end-to-end.
- ☐ Purchase, restore, cancellation, expiry, renewal, billing issue, and transfer tested.
- ☐ 1024 × 1024 icon and required 1179 × 2556 screenshot exported.
- ☐ Privacy policy and Support URLs live and accurate.
- ☐ Public demo under two minutes shows a real on-device transaction.
- ☐ Devpost categories selected only where every requirement is proven.
- ☐ Submission completed and verified at least 24 hours before the deadline.

Appendix B • Sources and assumptions

Official Shipaton 2026 rules: revenuecat-shipaton-2026.devpost.com/rules

RevenueCat submission preparation guide: revenuecat.github.io/codelabs/shipaton-2026-prep.html

Readiness scoring and probability ranges are independent strategic judgments, not official RevenueCat scoring or statistical forecasts. Rules can change; repeat a full eligibility check immediately before submission.

FINAL RECOMMENDATION Choose Design as the product-quality target. Enter Replit Idea to Income only when the required workflow, public-post, growth, and revenue evidence are real. Spend the remaining runway on release proof, user evidence, and narrative discipline—not feature count.
